BDI ADDS TO POPULAR COLLECTION WITH LATEST STORAGE SOLUTION

A/V Storage is No Illusion with New Mirage Tower, Model 8222

CHANTILLY, VA. – April 6, 2009 – Contemporary furniture innovator BDI adds a new model to their popular Mirage collection. The Mirage Tower 8222 is a sleek, enclosed cabinet designed to house today's state-of-the-art audio and home theater components. Whether it is used with the Mirage home theater cabinet, or standing on its own, the Mirage Tower provides a stunning way to house and access system components.

Standing at 40.25" H x 22" W x 22" D, the Mirage Tower features an IR-friendly grey tinted glass front, and five adjustable shelves allowing for a range of components. The soft-close door can easily be reversed allowing it to swing open from the left or right. Other key aspects of the Mirage Tower include:

- Ventilation slots in the base, shelves and removable back panel, which allow cooler air to enter from the bottom and hot air to flow out from the rear of the tower.
- Back panel is designed to accept an optional internal fan (up to 3.15" square) for additional active cooling.
- Concealed wheels beneath the cabinet allow the tower to be rolled for easy access to the rear of the unit and cable connections.
- Integrated cable management keeps everything organized and stored in order.

"Our Mirage A/V collection has attracted a lot of attention since its introduction last year," says Bill Becker, CEO and Design Director of BDI.

"We wanted to expand on the Mirage Cabinet design by adding a contemporary tower which provides storage needed for substantial audio and home theater systems." The Mirage collection features an integrated black glass top, tinted glass door and satin black cabinet. The collection is designed by Cristian Wicha and Al Glass.
